|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Subscribe to CRM Analytics Assets                       |                                                                                      | Subscribe to CRM Analytics lenses and dashboard widgets to send scheduled status updates by email, or subscribe to CRM Analytics dashboards in Slack. For subscribing to tables, the Download Analytics Data permission is also required. Your organization's data may be saved and/or processed by third-party services, and Salesforce is not responsible for data users choose to send outside of Salesforce. |
| Subscribe to Dashboards                                 |   | Subscribe to dashboards in Lightning Experience to schedule dashboard refreshes and send notifications by email. Your organization's data may be saved and/or processed by third-party services, and Salesforce is not responsible for data users choose to send outside of Salesforce.                                                                                                                          |
| Subscribe to Dashboards: Add Recipients                 |   | Specify recipients of email notifications from dashboard subscriptions in Lightning Experience. All recipient email addresses appear in the subscription email's "to:" field, so subscription email recipients will be able to see each other's email addresses regardless of User Sharing settings.                                                                                                             |
| Subscribe to Dashboards: Send to Groups and Roles       |   | Set public groups and roles as recipients of dashboard subscriptions in Lightning Experience.                                                                                                                                                                                                                                                                                                                    |
| Subscribe to Reports                                    |   | Subscribe to reports in Lightning Experience to schedule report refreshes and send notifications by email. Your organization's data may be saved and/or processed by third-party services, and Salesforce is not responsible for data users choose to send outside of Salesforce.                                                                                                                                |
| Subscribe to Reports: Add Recipients                    |   | Specify recipients of email notifications from report subscriptions in Lightning Experience. All recipient email addresses appear in the subscription email's "to:" field, so subscription email recipients will be able to see other's email addresses regardless of User Sharing settings.                                                                                                                     |
| Subscribe to Reports: Send to Groups and Roles          |   | Set public groups and roles as recipients of report subscriptions in Lightning Experience.                                                                                                                                                                                                                                                                                                                       |
| Subscribe to Reports: Set Running User                  |   | Specify who report subscription recipients see report data as. The specified person's data access determines what data the report displays.                                                                                                                                                                                                                                                                      |
| Tableau Next Share Snapshot                             |                                                                                      | Allows access to share visual snapshots of Tableau Next metrics, dashboards, or visualizations into Slack. For security, without this access, snapshots are icons without data.                                                                                                                                                                                                                                  |
| Test Sandboxes in Mobile Publisher for Experience Cloud |                                                                                      | Allows testing a sandbox experience in the mobile publisher for Experience Cloud.                                                                                                                                                                                                                                                                                                                                |
| Transfer Record                                         |                                                                                      | Change the owner of most records.                                                                                                                                                                                                                                                                                                                                                                                |
| Ungoverned External Table Access                        |                                                                                      | Grant users permission to query data outside of Salesforce without creating a related DLO                                                                                                                                                                                                                                                                                                                        |
| Update Consent Preferences Using REST API               |                                                                                      | Use the PATCH method on the Consent REST API resource to update consent preferences.                                                                                                                                                                                                                                                                                                                             |
| Update Email Messages                                   |                                                                                      | Modify certain email message related records.                                                                                                                                                                                                                                                                                                                                                                    |
| Upload AppExchange Packages                             |   | Upload packages to AppExchange for distribution.                                                                                                                                                                                                                                                                                                                                                                 |
| Upload External Data to CRM Analytics                   |                                                                                      | Upload external data files through the CRM Analytics user interface to create datasets.                                                                                                                                                                                                                                                                                                                          |
| Upload Solution Bundles to Repository                   |                                                                                      | Allows users to upload solution bundles to an associated repository.                                                                                                                                                                                                                                                                                                                                             |
| Use Advanced Delivery Estimation Service APIs           |                                                                                      | Allow user to access the Advanced Delivery Estimation Service APIs                                                                                                                                                                                                                                                                                                                                               |
| Use Agentforce Default Agent                            |                                                                                      | Let users access Einstein features through a conversational AI assistant.                                                                                                                                                                                                                                                                                                                                        |
| Use Any API Auth                                        |                                                                                      | Allows authentication via SOAP API login() when SOAP login access is restricted by the org.                                                                                                                                                                                                                                                                                                                      |
| Use CRM Analytics                                       |                                                                                      | Run apps to which you have access; view their datasets, lenses, and dashboards; and create and edit lenses.                                                                                                                                                                                                                                                                                                      |
| Use CRM Analytics Templated Apps                        |                                                                                      | View apps based on available app templates.                                                                                                                                                                                                                                                                                                                                                                      |
| Use Custom Agents                                       |                                                                                     | Allow runtime user access to custom agents                                                                                                                                                                                                                                                                                                                                                                       |
| Use Delivery Estimation Service APIs                    |                                                                                    | Allow user to access the Delivery Estimation Service APIs.                                                                                                                                                                                                                                                                                                                                                       |
| Use generic Intelligent Document Processing             |                                                                                    | Extract data from documents using generative AI.                                                                                                                                                                                                                                                                                                                                                                 |
| Use Identity Connect                                    |                                                                                    | Gives the user access to the Identity Connect product which provides Active Directory integration.                                                                                                                                                                                                                                                                                                               |
| Use Identity Features                                   |                                                                                    | Gives the user access to Identity features such as App Launcher.                                                                                                                                                                                                                                                                                                                                                 |
| Use Micro-Batching to Create Records                    |                                                                                    | Create records in batches, rather than one at a time. To facilitate performance and scale, this process bypasses field-level security and record-type validations.                                                                                                                                                                                                                                               |
| Use Omnichannel Inventory APIs                          |                                                                                    | Manage inventory using the Omnichannel Inventory Service APIs.                                                                                                                                                                                                                                                                                                                                                   |
| Use Omnichannel Inventory Availability APIs             |                                                                                    | Use Omnichannel Inventory Availability APIs                                                                                                                                                                                                                                                                                                                                                                      |
| Use Order Entry                                         |                                                                                    | Allows a user to create orders in Salesforce Order Management.                                                                                                                                                                                                                                                                                                                                                   |
